0.1	Technical	3
0.2	Preface	4
0.3	Philosophy	6
1	Berry's Phase and Fine Structure	17
1.1	Abstract	17
1.2	Introduction	17
1.3	Generalized Berry phase	19
1.4	Spin-orbit feedback loop	20
1.5	Generalized fine structure constants	21
1.6	Gravitomagnetic coupling	23
1.7	Hypocycloidal and epicycloidal dynamics	26
1.8	Charge	27
1.9	Overload	28
1.10	Measurement	29
1.11	Conclusion	32
1.12	Summary	34
2	Geometric Phase Locked in Fine Structure	35
2.1	Abstract	35
2.2	Round trips	35
2.3	Round trips	37
2.4	Fine structure iteration	38
2.5	Frequencies	39
2.6	Topology	40
2.7	Hypocycloidal and Epicycloidal	41
2.8	Gravitomagnetic coupling	43
2.9	Summary and conclusion	44

3	Phase-Locked Spacetime Memory	45
3.1	Abstract	45
3.2	Information storage	46
3.3	Information transfer	47
3.4	Information processing	48
3.5	Conclusion	50
4	Iterative Interplay: AB and Berry Phase	53
4.1	Abstract	53
4.2	Introduction	53
4.3	Berry's Topological Phase	54
4.4	The AB topological phase	57
4.5	Coupling AB with Berry	59
4.6	Solitons and monopoles	60
4.7	A scalar field for the deficit angle	61
4.8	Conclusion	62
5	Topological Phase Field Gradients	65
5.1	Abstract	65
5.2	Background	65
5.3	Pseudospheres and sine-Gordon equation:	66
5.4	Bäcklund transformations:	67
5.5	Sine-Gordon potential:	67
5.6	Stereographic projection:	68
5.7	Oscillator potential:	69
5.8	Bohlin transformation and phase-distance mapping:	69
5.9	Self-energy and coupling energy	70
5.10	The coupling strength	70
6	Bäcklund Transformations	73
6.1	Abstract	73
6.2	Loop sub-loop coupling	73
6.3	Sine-Gordon soliton	75
6.4	Spin-orbit resonance condition	76
6.5	Coupling and self-energy	76
6.6	External coupling: Coulomb force	77
6.7	Berry's Topological Phase	78
6.8	The coupling strength	79

<i>CONTENTS</i>	13
7 Josephson Effect and Pseudospherical Junctions	81
7.1 Abstract	81
7.2 Introduction	81
7.3 Loop/sub-loop coupling	82
7.4 Sine-Gordon soliton	85
7.5 Resonance condition	86
7.6 Experimental tests	88
8 Soliton Coupling Driven by Phase Fluctuations	89
8.1 Abstract	89
8.2 Introduction	89
8.3 Preliminary measurements	90
8.4 Quantum field theory	90
8.5 Rayleigh-type perturbed SG	91
8.6 Rayleigh-type auto-parametric system	91
8.7 The coupling mechanism	92
8.8 Phase averaging	92
8.9 1-dimensional coupling soliton energy	93
8.10 3-dimensional coupling	93
8.11 Virtual photons	94
8.12 Conclusion	95
8.13 Outlook	95
9 Fundamental Soliton Compton Mass	97
9.1 Abstract	97
9.2 Introduction	97
9.3 Quantum field theory	98
9.4 Rayleigh-type perturbed SG	98
9.5 Rayleigh-type auto-parametric system	99
9.6 The coupling mechanism	99
9.7 Phase averaging	100
9.8 1-dimensional coupling soliton energy	101
9.9 Energy scaling	101
9.10 Results	102
9.11 Can fundamental baryons be solutions to the SG?	103
9.12 Relevance to the previous work	104

10 Solitons Stabilized by Opposite Charge	105
10.1 Abstract	105
10.2 Introduction	105
10.3 Time independent field equations	106
10.4 Polarization and radiative coupling of pulsions	107
10.5 Topological and geometric phase interpretation	108
10.6 Coupling strength and energy	110
10.7 Concluding Remarks	111
11 Towards Fundamental Particle Properties	113
11.1 Abstract	113
11.2 Introduction.	113
11.3 Bosonizing a radial symmetric Dirac equation	114
11.4 Topological currents	115
11.5 Stationary boson exchange	116
11.6 Coupling by sine–Gordon	116
11.7 Background-soliton and soliton-soliton coupling	117
11.8 Origin of the basic soliton energy	118
11.9 Currents and bridges	119
11.10 Identification of particles	120
11.11 3-dim. charge and permittivity	121
11.12 Local screening?	122
11.13 The small difference	122
11.14 Conclusion	123
12 Bosonization	127
12.1 Abstract	127
12.2 Introduction	127
12.3 Bosonization	128
12.4 Radial symmetric Dirac equation	128
12.5 Towards solitons	130
12.6 Topological SG currents and potentials	131
12.7 Charge and current density	132
12.8 Electromagnetic coupling and phase shift	133
12.9 Possible route to solitons	134
12.10 Background-soliton and soliton-soliton coupling	136
12.11 Coulomb coupling	137
12.12 Spin-asymmetry κ	138

12.13	Origin of the basic soliton energy	139
12.14	The 3-dim. coupling constant	140
12.15	Another interesting relation	141
12.16	Conclusion	142
13	About Linear Planck Units	143
13.1	Abstract	143
13.2	Introduction	143
13.3	Quantum dynamics	144
13.4	Defining linear geometric units	145
13.5	Discussion and conclusion	147
14	The Baryon Mass Limit	149
14.1	Abstract	149
14.2	Introduction	149
14.3	Particle–wave coupling	150
14.4	Uncovering the hidden mass	150
14.5	So what have we done?	151
14.6	Detailed values from Bosonization	152
14.7	Conclusion	153
15	Self-Consistent Quantum Gravity	155
15.1	Abstract	155
15.2	Introduction	156
15.3	Generating the scale references	156
15.4	Critical limit	158
15.5	The quantum unit	159
15.6	Geometric quantum-gravity interface	160
15.7	Self-consistent scaling	161
15.8	More scaling relations	163
15.9	Non-coupling currents.	164
15.10	Relevance for nuclear physics	166
15.11	Conclusion	167
